

CST 338 Project 2 (Part 1)

Due October 28, 2016 at 11:52pm

Please present a **use case model**. Select one topic from the following five potential software systems:

- Car-Repair Shop Reservation System
- Flight Reservation System
- Movie Ticket Reservation System
- Book Checkout System for the CSUMB Library
- Restaurant Reservation System

In your use case model, you have to

1. Draw a **use case diagram** to describe the title of your software system, actors, use cases, and associations. Your diagram has to have **at least three actors and five use cases**.
2. **Pick three use cases from the five use cases** of your use case diagram. Then, describe each use case in detail as you learned in the class. In the assignment, **each use case has a basic flow and at least two alternative flows**. For the detailed description, refer to the sample use case, [ATM example](#) (also on iLearn).
3. You can write your use case model using *Google Docs*. You can draw the use case model diagram using a tool such as *Google Drawings*. Then, insert it to the *Google Docs* file.

Note: Part 1 of Project 2 is worth 15% of your Project 2 grade.
